

Shear Simplified Diverter for Increased Reliability

Upgrade

Upgrade Applications

Applicable to all Model IV and K2S (Knife-to-shear) Shears that currently have a belt style diverter system.

Upgrade Description

The individual belt diverter systems are removed and replaced with a simple solid torque shaft, no-crush wheel design.

Upgrade Benefits

Machine maintenance is significantly reduced.

- The number of moving parts and wear items (belts, bearings, shocks) is dramatically reduced.
